

## Designed to perform. True wideband stereo sound.

The Jabra GN2000 series headsets features superb call clarity for PC-based IP telephony, plus wideband stereo for other audio applications. Best of all, they are tested to withstand rough handling by multiple users, which makes them perfect for use in contact centres. Just look at what you get:

- Robust design for exceptional comfort and day-after-day durability
- Wideband sound for natural audio quality
- Large ear cushions for extra comfort
- Hard-wired USB for PC-based IP telephony with Jabra GN2000 USB
- Choice of noise cancelling microphone or SoundTube boom arm with Jabra GN2000 IP

Complete with in-line sound controls, the Jabra GN2000 USB is a true plug-and-play product that is Microsoft Windows® certified. It comes with our popular SoundTube, equipped with a high-quality microphone. Feather-soft leatherette ear cushions provide exceptional comfort thanks to fully gimbaled mountings. That means our earpieces automatically adjust to the shape and angle of individual ears. And less manual adjustment means you agents can concentrate on their calls and not on their headsets.

The large ear cushions of Jabra GN2000 USB and Jabra GN2000 IP also provide better acoustical coupling, ensuring a rich incoming signal. Unlike other so-called "wideband" headsets that cut off around 4,000 Hz, the Jabra GN2000 USB and Jabra GN2000 IP provide full frequency response up to 6,800 Hz for optimum call clarity with significantly less need to ask customers to repeat themselves. For safety, they also feature our PeakStop™ technology, which cuts off sudden loud noises above 118 dB SPL.

Built to last, the Jabra GN2000 Series is our toughest contact centre headset yet. Our headbands are made of impact-resistant materials that are strong and resilient and keeps the headset firmly, yet comfortably in place throughout the workday.

The Jabra GN2000 series is also available in variants for conventional desk telephony with our Quick Disconnect (QD) plug.
