

Increased productivity. Desk and IP telephony.

The GN 4800 is an innovative office headset solution that provides seamless integration between a computer system and traditional or IP telephony. It provides a smooth migration path to IP telephony making it a future-proof investment. The solution makes it possible to work hands free, listen to audio applications and answer calls with just one headset.

- Increased productivity and job satisfaction in noisy environments
- One headset for desk phone telephony, PC-based IP telephony and PC-audio applications
- Future proof IP telephony investment due to the already built-in IP functionality
- Never miss a call due to automatic switching functionality between desk phone and PC
- Choice between Hi-Fi stereo or wideband stereo quality headset

Unwanted noise in an open office environment can decrease productivity by up to 20%. Perhaps that is why more and more employees are using headsets and are listening to music to help them concentrate. In other jobs it is essential to be constantly up-to-date with the current news situation i.e. using a headset to listen to radio or web TV, but normally this means taking off the headset when answering a telephone call. The GN 4800 solves all these problems by seamlessly integrating music and telephony as well as providing the freedom of working hands free.

The GN 4800 is available with two different headsets

The GN 4800 Hi-Fi which provides Hi-Fi stereo quality and crystal clear communications in noisy working environments due to its noise cancelling microphone and the GN 4800 Wideband with a standard microphone.

Naturally, both are professional headsets built to last while providing high sound quality and a comfortable fit for all-day use. The GN 4800 is true plug-and-play and it is 100% Microsoft Windows® compliant.

GN 4800

Features	Benefits
Seamless integration of traditional and IP telephony	No need to replace the GN 4800 when migrating to IP telephony makes it a futureproof investment.
Audio applications, music and telephony in one headset	No need to switch headset when taking a call means never missing a call again.
Stereo sound (Hi-Fi or wideband quality)	High quality stereo sound allows users to block out unwanted noise in the workplace and focus on the task at hand.
Ring tone detection	Automatic switching from computer to telephone mode if there's an incoming call.
Headset/handset switch	Easy switch to handset use when needed.
