

Jabra Direct

Giving you confidence for each and every call

Jabra Direct is a desktop software solution that offers complete integration of your softphone and headset connectivity via a user friendly interface. The seamless integration between the audio device and the softphone allows users to benefit from enhanced mobility and the ability to multitask while on a call.

Jabra Direct has two core functions

- Readiness status – of your device and softphone via a dashboard
- Headset personalisation via settings, firmware updates and call control

How it works

Jabra Direct is an easy to install solution that can interface with and manage a range of softphones. Jabra Direct automatically detects and enables Remote Call Control over the IP softphone(s) installed on the computer. Jabra Direct also allows you to update your Jabra USB device with the latest firmware. A firmware update will typically include new or improved functionality and minor corrections.

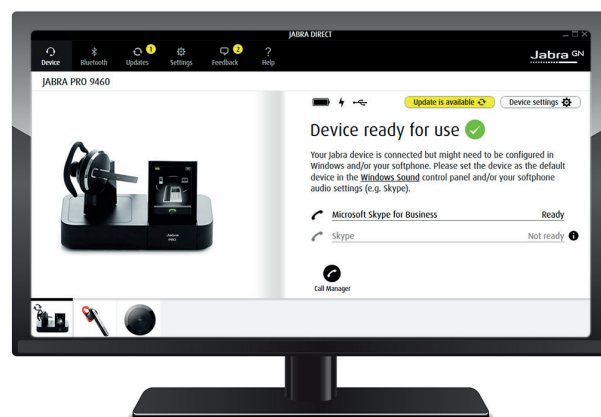

Personalise your Jabra headset

Jabra Direct allows you to manage and configure your Jabra headset via the setting controls. Offering you the flexibility and confidence to select the best headset choice and softphone connection for each and every call.

Compatibility

Jabra Direct provides compatibility between Jabra USB devices and an extensive range of softphones. This enables you to have Remote Call Control (answer/end call, mute, redial etc) from your Jabra audio device over your softphone(s).

The Remote Call Control features available for each softphone can be seen in below Softphone/Feature matrix. The exact softphones supported (names and versions) can be seen in below softphone compatibility list.

Jabra Direct Homescreen

Jabra Direct Dashboard

Feature	Benefit
What is Jabra Direct	Jabra Direct is an application with a simple user interface, that enables you to easily get readiness status of your Jabra device(s) and softphone(s). The built-in dashboard gives you a device and softphone connectivity status which increases your confidence and ready status for every call. Jabra Direct enables you to personalize your Jabra device; firmware update your device for the best possible performance; and to have Remote Call Control over you softphone(s).
Remote Call control	Jabra Direct enables you to have Remote Call Control (answer/end call, mute, redial etc) from your Jabra audio device. Jabra Direct will automatically detect and enable Remote Call Control for the softphones installed on you computer.
Dashboard	The Jabra Direct dashboard is an user friendly status menu available from the Windows notification area (typically accessed via the lower right corner of the Windows desktop). The dashboard shows the status of your headset, if any updates are available, and if your softphone(s) are ready for use. By clicking your Jabra device in the dashboard, you will be linked into the Jabra Direct main application for managing setting preferences, start firmware updates or access applications that might be available for your Jabra device
Settings	The device setting control in Jabra Direct enables you to configure your Jabra audio device to fit you personal preferences.
Firmware update	The Jabra Direct Firmware Updater enables you to update the firmware of your Jabra devices. Firmware is a type of software that runs inside many types of electronic devices, managing their various internal processes. Jabra releases updates that improve performance and add new functionalities to your headset or speakerphone. To receive firmware update notifications, go to Settings and switch Update Notifications to 'On'.
Call Manager	The Jabra Direct Call Manager is an application available for selected Jabra devices, and can enable call control of Jabra multiuse headsets via a graphical user interface and the keyboard on the PC
