

REINVENT THE CLASSROOM.

**Equip your teachers with the tools  
to deliver effective learning from  
anywhere.**

## JABRA SOUND- AND VIDEOSOLUTIONS

# Reinvent the classroom

The landscape of learning has changed dramatically, with schools across the globe having to think of new and creative ways to help their teachers continue teaching, wherever they are.

In April 2020, we surveyed hundreds of teachers – from grade school right up to university level, and across multiple institutions – to understand their key challenges. We discovered that:

- 61% of teaching is now taking place virtually<sup>1</sup>
- 54% of teachers find keeping students engaged and focused is their biggest challenge<sup>1</sup>
- 44% of students are struggling due to both poor audio and poor video quality<sup>1</sup>

Each product is designed to offer maximum flexibility, maximum portability, and maximum ease-of-use, so no matter where your teachers are, they're only ever seconds away from their students.

**Welcome to a whole new world of remote learning possibilities.**

DID YOU KNOW?

# 44%

of students are struggling due to both poor audio and poor video quality<sup>1</sup>

With Jabra Sound- and Videosolutions students will be able to see and hear everything loud and clear.

## CLASSROOM

# Class is still in session

Traditional in-classroom teaching might be off the table for a while, but that doesn't mean your classrooms have to go unused.

With a Jabra PanaCast camera, you can bring your classrooms back into commission, and allow your teachers to use their full spectrum of teaching aids, without being tied to their desks.

Three 13-megapixel cameras create a live feed of the whole room – from one wall to the other – while our patented real-time video stitching technology ensures there is no visual distortion as the teacher moves around the space. And thanks to our cutting-edge whiteboard streaming feature, they can even live-stream the whiteboard.

Our Intelligent Zoom feature can automatically adjust the frame to focus only on the teacher, for lessons that require a little more in-depth explanation, and Vivid HDR automatically balances the lighting in rooms where there is a bright light source – such as a wall of windows – on one side.

And to ensure everyone can hear the lesson in crystal-clear detail, our Jabra Speak 750 speakerphone delivers premium 2-way audio, allowing teachers to easily communicate with students in real time, just as they would if they were there. And for larger classrooms and auditoriums, teachers also have the option to connect two Speak 750 speakerphones together, expanding the coverage across a bigger area.

There are a number of ways to set up your classroom, depending on your individual requirements.

TEACHING FROM HOME

## Take the **classroom** home

When your teachers can't be in their classroom all the time, flexibility is essential.

With many teachers around the world having to deliver lessons from whatever space they have available, it's important that they have the tools they need to keep their students engaged and focused.

The Jabra PanaCast is extremely portable, and available with an optional table mount. This allows teachers to carry it home with them in their bag, and take it out whenever and wherever they need to recreate their classroom today.

It's plug-and-play, so it couldn't be easier to set up and use – simply connect the cable to a laptop and it's ready to go. And with intuitive features like Intelligent Zoom and Vivid HDR, teachers don't have to worry about background distractions or unbalanced lighting, so any space is a potential classroom.

For audio, teachers can choose from a range of options, depending on their setup. The Jabra Speak 750 is also extremely compact and portable, so they can easily take it home, or wherever they need to go.

But if teachers need greater control over what sounds their students hear – for example if they have others in their home creating background noise – they can also opt for a Jabra Evolve headset. These professional headsets are engineered for professionals in busy open offices, delivering outstanding professional-grade call quality, with advanced noise-cancelling microphones.

Whatever combination of products they choose, they can rest assured that their students will be able to see and hear everything loud and clear.

LEARNING FROM HOME

## Tick tech off their list of distractions

As any teacher knows, keeping students engaged and focused can be hard work at the best of times.

With many students currently learning through their laptop screen, it's important to minimize distractions as much as possible.

When your teachers are equipped with a Jabra PanaCast, their students get a front row seat from wherever they happen to be. High definition wall-to-wall coverage of the classroom ensures they get a full view of everything the teacher does – from writing on the whiteboard, to moving around the classroom and using different learning aids.

And thanks to the seamless, premium audio provided by the Jabra Speak 750 and the Evolve Series of professional headsets, they can participate in the discussions from anywhere.

Each Evolve headset is lightweight and comfortable enough for all-day wear, while the outstanding professional-grade call quality ensures they'll get the best experience with whatever communications platform they're using.

And with plug-and-play functionality across the full range, students can simply take it out, plug it in, and get learning.

Jabra solutions make remote learning easier and more accessible for everyone, wherever they are.
