

## Jabra Connect 5t - Titanium Black

### How do I enable stereo mixing on my Android smartphone when I use just one earbud?

If you want to use your Jabra earbuds in mono earbud mode, you must enable stereo mixing on your Android smartphone by changing the audio codec to AAC, Qualcomm® aptX™, or SBC in the Developer options. For further details, refer to the user manual for your Android smartphone.

#### **Note**

Stereo mixing is automatically enabled for iOS devices.
