

Jabra PanaCast 50 Room System MS

How do I share a separate view of the whiteboard in Microsoft Teams Rooms?

In Microsoft Teams Rooms, you can share a view of the whiteboard as a separate content camera view*. This will open a separate video stream of the whiteboard, in addition to the video stream of the meeting room.

To set this up, follow these steps in Jabra Direct and Microsoft Teams Rooms.

1. In Jabra Direct, select the Jabra PanaCast 50 and go to Settings > Camera > Whiteboard sharing mode.
2. Select **In separate content camera view**.
3. In Microsoft Teams Rooms, go to Settings > Devices tab > Camera Defaults.
4. Select **Jabra PanaCast 50 Content Camera** as the content camera.

Note

If Dynamic Composition is enabled, the whiteboard video will not be available.

*Separate content camera view is not supported for macOS.
