

## What is Find My Jabra?

### Prerequisites

- [Jabra Sound+ - iOS](#)
- [Jabra Sound+ - Android](#) (Android devices require the use of Google Maps)

Jabra Sound+ uses your phone's location data to store your Jabra device's last known location. If you misplace your Jabra device, you can use this information to locate it using the map on your smartphone. You can also activate your Jabra device to make a sound, so it is easier to find. The Find My Jabra feature is disabled by default.

Jabra Sound+ only stores the last known location, and any previous location data is permanently deleted. All location data is stored locally on your phone and is never shared or stored externally. If you remove permissions for the Find My Jabra feature, all location information is deleted and it will not be possible to locate your Jabra device. It is not possible to restore location data once it has been deleted.
