

How do I enable Spotify playback for my Jabra Elite 2 headset?

Prerequisites

- Android - version 7 or later
- Spotify - latest version

In Jabra Sound+, you can set up your Jabra Elite 2 to playback from Spotify by double-pressing the Right button.

To enable Spotify playback, go to Jabra Sound+ > Settings icon > Voice Assistant/Spotify. Select **Spotify**.

When you are not on a call or already listening to music, you can double-press the Right button to resume the last played song. If Spotify is already open on your mobile device, double-pressing the Right button plays a Spotify recommended song. Spotify playback also works in mono earbud mode if you use the Right earbud.

Note

If you enable Spotify in Jabra Sound+, you cannot also use the voice assistant because they use the same button control. Double-pressing the Right button is by default set up to activate the voice assistant.
