

Jabra Perform 75

How do I get the best fit with my Jabra Perform 75?

To get the best fit, adjust the headband so that the headset fits your head comfortably. The comfort pad should rest right above the ear.

The headset can be worn with the microphone on the left or right side. It is important to position the microphone close to your mouth. The boom arm can be carefully bent for better positioning.

The headset includes both a leatherette and foam cushion. The leatherette cushion provides better isolation from outside sound. The foam cushion is more breathable and better suited for warmer environments.
