

Jabra Elite 8 Active - Navy

What is Microsoft Swift Pair?

Microsoft Swift Pair is a fast and easy way to connect your compatible Jabra device with your Windows computer. Put your compatible device in pairing mode near your computer. Then in the notification click **Connect** to complete the pairing.

Swift Pair is available on Windows version 10 and later. However, it may not be enabled by default. Go to the **Bluetooth and other devices** setting to enable this feature.

Jabra devices need to support Microsoft Swift Pair for the device to be detected by Swift Pair. For more information, check the technical specification document on the support page for your device.

Note

Swift Pair is for connecting Bluetooth devices easily and quickly. It does not guarantee performance and functionality of the connected devices.
