

Jabra Engage 65 Stereo

Why does my Jabra Engage 65 headset announce “out of range”?

Your Jabra Engage 65 headset may announce “out of range” due to one of the following reasons:

- The headset may be too far away from the base, so there is no connection between them. Try moving closer to the base to reestablish the connection.
- The headset and the base cannot pair and connect, because the firmware versions are different. Using Jabra Direct or Jabra Xpress, try updating the firmware of both the headset and the base to version 2.xx or later to resolve the issue.
