

# Jabra Engage 75 Convertible

**How do I connect my Jabra Engage 75 with my Cisco 8961, 9951, 9971 desk phone so I have remote call control using my headset?**

## Prerequisites

- A suitable USB cable purchased separately (or the supplied USB cable for Jabra Engage - if it is not being used for normal computer connection)
- One of the following Cisco phones: 8961, 9951, 9971 (FW version 2.2.0 or later)

Important: the following Cisco requirements must be met to use the remote call control:

- Cisco Unified Communications Manager (CUCM) release 7.1(3a) or later, SU1 and phone firmware 9.0(3) or later
- Cisco Call Manager Express version 4.1 or later, and phone firmware 9.0(3). Note, you will be informed about the required IOC version during the download (Cisco).

## Connect your headset

1. Connect the USB cable to the USB port on your Cisco phone.
2. Connect the other end of the USB cable into the port marked with a USB symbol on the Jabra Engage base.

Do not use the USB port on the base marked with a USB symbol and the text 'PC'. This port is intended for the normal computer connection to the base.

3. Follow the onscreen setup wizard on the Engage base to complete the set up.

## Phone/system settings

To set up the Communication Manager, navigate to the **Wideband Headset UI Control** tab. Select the **Enabled** option for each terminal.

Select **Human Interface Phone**.
