Jabra Talk 45 - Black

What is PBAP (Phone Book Access Profile)?

Phone Book Access Profile (PBAP) enables a Jabra headset to access the phone book of a paired mobile phone, and announce the name of an incoming caller. It is similar to caller ID which announces the number of an incoming caller.

To use the PBAP function, the following prerequisites must be met:

- Your mobile phone must support PBAP.
- When you pair your Jabra headset with your mobile phone, you must allow access to your phone book.
- The number of the incoming call must be associated with a contact that is stored in the phone book.
- The incoming call is not from an unknown, unlisted, or blocked caller.

Note: PBAP in Japanese language only supports number readout. PBAP in Chinese language is supported only in Chinese Simplified.
