

Jabra Engage 50 Stereo

How do I manually control the status light on my Jabra Engage 50?

Prerequisites

- Jabra Engage Link

You can manually control the status light using the optional Jabra Engage Link control unit. You can, for example, change the status light to red to show others you are busy. The Jabra Engage Link also enables call control with many different softphone applications.

For information about acquiring the Jabra Engage Link, go to [Jabra accessories](#).

Note

You can turn off the status light function using [Jabra Direct](#). Click **Device Settings, Headset**, and click **Headset busylight** to turn the status light function off/on.
