

Jabra Elite 85h - Titanium Black

How do I optimize the audio settings for listening to music and watching videos?

Prerequisites

- [Jabra Sound+ - Android](#)
- [Jabra Sound+ - iOS](#)

You can optimize the audio settings for your headset on multiple devices.

Jabra Sound+ app - music equalizer

Make sure to adjust the bass, mid-range, and treble settings to suit your preferred audio.

Connected device - audio

Many smartphones and tablets have their own audio settings. Check and adjust these device audio settings to improve the audio experience.

Connected device - maximum speaker volume

Depending on the smartphone or tablet audio settings, the maximum potential volume may be disabled due to default settings for hearing protection from the device manufacturer.

If you are using the 3.5mm audio jack to connect, maximize the speaker volume by turning up the volume on the Jabra Elite 85h, and also the speaker volume on the connected device. This is necessary because the 3.5mm audio jack connection, compared to a Bluetooth connection, does not align the level of speaker volume between the headphones and the connected device.

Music and video apps - audio

Many smartphone and tablet apps have their own audio settings, which

are independent of the device audio settings. Check and adjust these app audio settings to improve the audio experience.

Note

We recommend always updating to the latest available firmware to ensure the best product experience—including audio quality.
