

Jabra Evolve2 85 - USB-C UC Stereo - Black

How does on-ear detection work with my Jabra headset?

The headset has built-in sensors that detect when you put on the headset and when you take it off.

The sensors enable the following audio controls.

- Auto pause music

When you are listening to music, take off the headset to pause the music. Put on the headset again to resume the music.

- Mute call

When you are on a call, take off the headset to mute the call. Put on the headset again to unmute the call.

Note

You can configure the settings for on-ear detection using Jabra Sound+ ([Google Play](#) | [App Store](#)) on your smartphone or [Jabra Direct](#) on your computer.
