

## Jabra PanaCast 20

### What does the orange LED on the Jabra PanaCast 20 mean?

When the Jabra PanaCast 20 detects low light, the LED will show solid orange. This indicates that lighting conditions are not optimal and people on a video call may not be able to see you well.

Check the privacy cover, and slide it to ensure it is fully open. If the privacy cover is open and the orange LED is still showing, the lighting in your environment is likely too dark. Try to increase the lighting conditions in the room.
