

Jabra Enhance Plus - Gold Beige

What other hearing technology is in Jabra Enhance Plus?

Jabra Enhance Plus uses some of the same advanced technology that GN hearing aids are known for. We have leveraged our extensive knowledge to optimize each feature of this product.

- Warp Compressor – Sound is analyzed using resolution similar to the human ear, to obtain the most natural sound quality.
- Digital Noise Reduction – Improves listening comfort for both stationary and impact noises while keeping speech clear. An appropriate level of noise reduction is automatically applied based on the listening situation.
- Digital Feedback Suppression – Two control systems keep feedback whistling from interfering with high quality amplification of sound.
- Binaural Beamformer – Directionality using an ultra-narrow beam, isolates sounds coming from in front of you, so you can hear clearly in the most challenging situations.
