

# Jabra Elite 8 Active Gen 2 - Coral

## How do I reactivate Google Assistant on my Android phone if I previously chose to not activate it?

### Prerequisites

- Android phone with Google Assistant as the default voice assistant

The first time you pair your Jabra headset with your phone, you are asked to activate Google Assistant. If you choose to not activate it, you cannot select Google Assistant as the voice assistant in Jabra Sound+.

If you decide later that you want to use Google Assistant, follow these steps to reactivate it on your phone.

1. Go to the Bluetooth menu on your phone and delete the Jabra headset pairing.
2. Re-pair your headset with your phone.
3. Place your earbuds into the headset cradle and close the lid.
4. Remove your earbuds from the cradle.
5. When prompted, select Activate to enable Google Assistant.
6. If the prompt does not display, follow steps 1-4 until the prompt appears.
