

Jabra BT2046

What do the LEDs on my Jabra device mean?

Here is an explanation of the LED colors and behaviors.

LED indicator	State
Solid light	In pairing mode
Slow single flash	Paired with phone and in standby mode*
Slow triple flash	Not paired with phone and in standby mode*
Normal double flash	Active on a call
Quick double flash	Incoming or outgoing call
Quadruple flash	Battery low

*The Jabra device is equipped with the Jabra Discreet Light feature, which turns off the LED after 1 minute of non-activity. The headset is still active, and the light will flash again if you tap the **Answer/end** button, or if there is any call activity.
