

Jabra Halo2 - Black

Best practices for storing rechargeable batteries

The battery in your Jabra device is rechargeable, not replaceable.

To preserve and store rechargeable batteries, use the following guidelines. These guidelines apply to the use of batteries in general, and not specifically to Jabra devices.

- Avoid placing batteries in direct sunlight.
- Avoid placing batteries in extreme cold.
- Do not store batteries for extended periods without recharging them, at least once a month for most products.
- If you handle or store rechargeable batteries incorrectly, their lifetime may be reduced.
