

Jabra Style

My Jabra device shut down after it was charged, but why is the switch still on?

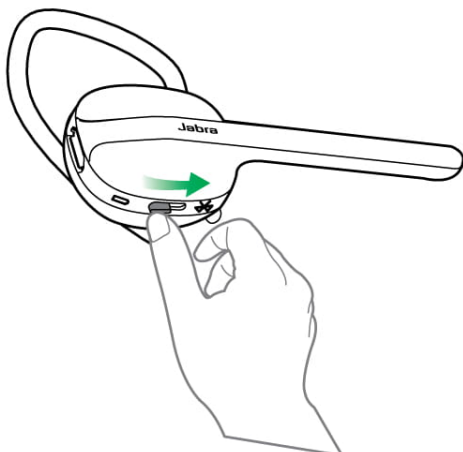

If you connect your Jabra device to the charger when the **On/off/pairing** switch is set to "on", the headset goes into Power Nap mode when you disconnect it.

To turn off Power Nap and turn on your Jabra device, select one of the following options:

- Option 1: Press the **Answer/end** button once, and your Jabra device will start and reconnect to your smartphone.

- Option 2: Slide the **On/off/pairing** switch to the "off" position and then to the "on" position.
